

PRODUCT INFORMATION

FINISH CM

FINISH CM is a liquid designed to bulk cotton fiber and cotton blends to prevent the penetration of resins through the substrate. It is a non-reactive product and does not harm adhesion. It is best used with solvent-based coatings, but works well with water-based emulsions.

SPECIFICATIONS:

Appearance:	Clear liquid
pH (as is):	8.0 ± 1.0
Solubility:	Completely soluble in water
Specific Gravity:	Minimum 1.360
Toxicity:	None
Compatibility:	Compatible with lower alcohols, glycols, glycerin, softeners, and salts in normal use concentrations. Also, compatible with most anionic, nonionic, and mildly cationic substances.

FINISH CM is substantive. When used to prevent penetration, begin with 3% to 7% by weight of the bath. The amount needed will depend on the type and density of the fabric. Higher concentrations of FINISH CM can be made if lower weight pickup is desired.

FINISH CM can be combined with softeners, lubricants, or anti-curl agents to provide the hand and properties desired.

APPLICATION:

Apply by either pad or spray so that application is even and total wet pickup is 75%-100% of weight of fabric.

Dry the fabric before dipping in coating. You may find that the temperatures required to dry the fabric thoroughly may need to be increased due to the nature of the product. FINISH CM will not scorch, chalk nor dust.

The data and suggested formulations in this bulletin are based on information believed to be reliable and are offered solely for evaluation, investigation and verification of the numerous factors affecting results. Paradigm Lab's products are sold with the understanding the purchasers will make their own tests to determine the suitability of these products for the particular use. We assume no liability or responsibility for any damage to person or property resulting from or incident to the use of our products.

Statements concerning the use of Paradigm Lab's products are not be construed as recommending the infringement of any patent, and no liability for infringement arising out of any such use is assumed.
